Hardware Connections

1 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

2 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

3 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

4 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

5 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

6 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

7 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

8 Connect the **Console** port to a computer using a console cable for local configuration.

9 Press the **WPS** button for more than 1 second to enable the WPS function.

10 Press the **LED** button for more than 1 second to turn the LEDs on or off.

11 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

12 Connect the **USB** port to a computer using a USB cable for local configuration.

13 Connect the **Antenna** to the AP for wireless connections.

14 Connect the **Security Slot** to secure the AP to a fixed object.

15 Connect the **Console** port to a computer using a console cable for local configuration.

16 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

17 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

18 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

19 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

20 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

21 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

22 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

23 Press the **WPS** button for more than 1 second to enable the WPS function.

24 Press the **LED** button for more than 1 second to turn the LEDs on or off.

25 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

26 Connect the **USB** port to a computer using a USB cable for local configuration.

27 Connect the **Antenna** to the AP for wireless connections.

28 Connect the **Security Slot** to secure the AP to a fixed object.

29 Connect the **Console** port to a computer using a console cable for local configuration.

30 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

31 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

32 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

33 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

34 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

35 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

36 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

37 Press the **WPS** button for more than 1 second to enable the WPS function.

38 Press the **LED** button for more than 1 second to turn the LEDs on or off.

39 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

40 Connect the **USB** port to a computer using a USB cable for local configuration.

41 Connect the **Antenna** to the AP for wireless connections.

42 Connect the **Security Slot** to secure the AP to a fixed object.

43 Connect the **Console** port to a computer using a console cable for local configuration.

44 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

45 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

46 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

47 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

48 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

49 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

50 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

51 Press the **WPS** button for more than 1 second to enable the WPS function.

52 Press the **LED** button for more than 1 second to turn the LEDs on or off.

53 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

54 Connect the **USB** port to a computer using a USB cable for local configuration.

55 Connect the **Antenna** to the AP for wireless connections.

56 Connect the **Security Slot** to secure the AP to a fixed object.

57 Connect the **Console** port to a computer using a console cable for local configuration.

58 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

59 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

60 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

61 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

62 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

63 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

64 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

65 Press the **WPS** button for more than 1 second to enable the WPS function.

66 Press the **LED** button for more than 1 second to turn the LEDs on or off.

67 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

68 Connect the **USB** port to a computer using a USB cable for local configuration.

69 Connect the **Antenna** to the AP for wireless connections.

70 Connect the **Security Slot** to secure the AP to a fixed object.

71 Connect the **Console** port to a computer using a console cable for local configuration.

72 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

73 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

74 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

75 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

76 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

77 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

78 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

79 Press the **WPS** button for more than 1 second to enable the WPS function.

80 Press the **LED** button for more than 1 second to turn the LEDs on or off.

81 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

82 Connect the **USB** port to a computer using a USB cable for local configuration.

83 Connect the **Antenna** to the AP for wireless connections.

84 Connect the **Security Slot** to secure the AP to a fixed object.

85 Connect the **Console** port to a computer using a console cable for local configuration.

86 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

87 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

88 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

89 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

90 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

91 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

92 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

93 Press the **WPS** button for more than 1 second to enable the WPS function.

94 Press the **LED** button for more than 1 second to turn the LEDs on or off.

95 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

96 Connect the **USB** port to a computer using a USB cable for local configuration.

97 Connect the **Antenna** to the AP for wireless connections.

98 Connect the **Security Slot** to secure the AP to a fixed object.

99 Connect the **Console** port to a computer using a console cable for local configuration.

100 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

101 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

102 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

103 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

104 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

105 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

106 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

107 Press the **WPS** button for more than 1 second to enable the WPS function.

108 Press the **LED** button for more than 1 second to turn the LEDs on or off.

109 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

110 Connect the **USB** port to a computer using a USB cable for local configuration.

111 Connect the **Antenna** to the AP for wireless connections.

112 Connect the **Security Slot** to secure the AP to a fixed object.

113 Connect the **Console** port to a computer using a console cable for local configuration.

114 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

115 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

116 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

117 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

118 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

119 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

120 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

121 Press the **WPS** button for more than 1 second to enable the WPS function.

122 Press the **LED** button for more than 1 second to turn the LEDs on or off.

123 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

124 Connect the **USB** port to a computer using a USB cable for local configuration.

125 Connect the **Antenna** to the AP for wireless connections.

126 Connect the **Security Slot** to secure the AP to a fixed object.

127 Connect the **Console** port to a computer using a console cable for local configuration.

128 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

129 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

130 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

131 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

132 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

133 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

134 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

135 Press the **WPS** button for more than 1 second to enable the WPS function.

136 Press the **LED** button for more than 1 second to turn the LEDs on or off.

137 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

138 Connect the **USB** port to a computer using a USB cable for local configuration.

139 Connect the **Antenna** to the AP for wireless connections.

140 Connect the **Security Slot** to secure the AP to a fixed object.

141 Connect the **Console** port to a computer using a console cable for local configuration.

142 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

143 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

144 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

145 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

146 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

147 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

148 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

149 Press the **WPS** button for more than 1 second to enable the WPS function.

150 Press the **LED** button for more than 1 second to turn the LEDs on or off.

151 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

152 Connect the **USB** port to a computer using a USB cable for local configuration.

153 Connect the **Antenna** to the AP for wireless connections.

154 Connect the **Security Slot** to secure the AP to a fixed object.

155 Connect the **Console** port to a computer using a console cable for local configuration.

156 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

157 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

158 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

159 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

160 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

161 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

162 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

163 Press the **WPS** button for more than 1 second to enable the WPS function.

164 Press the **LED** button for more than 1 second to turn the LEDs on or off.

165 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

166 Connect the **USB** port to a computer using a USB cable for local configuration.

167 Connect the **Antenna** to the AP for wireless connections.

168 Connect the **Security Slot** to secure the AP to a fixed object.

169 Connect the **Console** port to a computer using a console cable for local configuration.

170 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

171 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

172 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

173 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

174 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

175 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

176 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

177 Press the **WPS** button for more than 1 second to enable the WPS function.

178 Press the **LED** button for more than 1 second to turn the LEDs on or off.

179 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

180 Connect the **USB** port to a computer using a USB cable for local configuration.

181 Connect the **Antenna** to the AP for wireless connections.

182 Connect the **Security Slot** to secure the AP to a fixed object.

183 Connect the **Console** port to a computer using a console cable for local configuration.

184 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

185 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

186 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

187 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

188 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

189 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

190 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

191 Press the **WPS** button for more than 1 second to enable the WPS function.

192 Press the **LED** button for more than 1 second to turn the LEDs on or off.

193 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

194 Connect the **USB** port to a computer using a USB cable for local configuration.

195 Connect the **Antenna** to the AP for wireless connections.

196 Connect the **Security Slot** to secure the AP to a fixed object.

197 Connect the **Console** port to a computer using a console cable for local configuration.

198 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

199 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

200 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

201 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

202 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

203 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

204 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

205 Press the **WPS** button for more than 1 second to enable the WPS function.

206 Press the **LED** button for more than 1 second to turn the LEDs on or off.

207 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

208 Connect the **USB** port to a computer using a USB cable for local configuration.

209 Connect the **Antenna** to the AP for wireless connections.

210 Connect the **Security Slot** to secure the AP to a fixed object.

211 Connect the **Console** port to a computer using a console cable for local configuration.

212 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

213 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

214 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

215 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

216 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

217 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

218 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

219 Press the **WPS** button for more than 1 second to enable the WPS function.

220 Press the **LED** button for more than 1 second to turn the LEDs on or off.

221 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

222 Connect the **USB** port to a computer using a USB cable for local configuration.

223 Connect the **Antenna** to the AP for wireless connections.

224 Connect the **Security Slot** to secure the AP to a fixed object.

225 Connect the **Console** port to a computer using a console cable for local configuration.

226 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

227 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

228 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

229 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

230 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

231 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

232 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

233 Press the **WPS** button for more than 1 second to enable the WPS function.

234 Press the **LED** button for more than 1 second to turn the LEDs on or off.

235 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

236 Connect the **USB** port to a computer using a USB cable for local configuration.

237 Connect the **Antenna** to the AP for wireless connections.

238 Connect the **Security Slot** to secure the AP to a fixed object.

239 Connect the **Console** port to a computer using a console cable for local configuration.

240 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

241 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

242 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

243 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

244 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

245 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

246 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

247 Press the **WPS** button for more than 1 second to enable the WPS function.

248 Press the **LED** button for more than 1 second to turn the LEDs on or off.

249 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

250 Connect the **USB** port to a computer using a USB cable for local configuration.

251 Connect the **Antenna** to the AP for wireless connections.

252 Connect the **Security Slot** to secure the AP to a fixed object.

253 Connect the **Console** port to a computer using a console cable for local configuration.

254 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

255 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

256 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

257 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

258 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

259 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

260 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

261 Press the **WPS** button for more than 1 second to enable the WPS function.

262 Press the **LED** button for more than 1 second to turn the LEDs on or off.

263 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

264 Connect the **USB** port to a computer using a USB cable for local configuration.

265 Connect the **Antenna** to the AP for wireless connections.

266 Connect the **Security Slot** to secure the AP to a fixed object.

267 Connect the **Console** port to a computer using a console cable for local configuration.

268 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

269 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

270 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

271 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

272 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

273 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

274 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

275 Press the **WPS** button for more than 1 second to enable the WPS function.

276 Press the **LED** button for more than 1 second to turn the LEDs on or off.

277 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

278 Connect the **USB** port to a computer using a USB cable for local configuration.

279 Connect the **Antenna** to the AP for wireless connections.

280 Connect the **Security Slot** to secure the AP to a fixed object.

281 Connect the **Console** port to a computer using a console cable for local configuration.

282 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

283 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

284 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

285 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

286 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

287 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

288 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

289 Press the **WPS** button for more than 1 second to enable the WPS function.

290 Press the **LED** button for more than 1 second to turn the LEDs on or off.

291 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

292 Connect the **USB** port to a computer using a USB cable for local configuration.

293 Connect the **Antenna** to the AP for wireless connections.

294 Connect the **Security Slot** to secure the AP to a fixed object.

295 Connect the **Console** port to a computer using a console cable for local configuration.

296 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

297 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

298 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

299 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

300 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

301 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

302 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

303 Press the **WPS** button for more than 1 second to enable the WPS function.

304 Press the **LED** button for more than 1 second to turn the LEDs on or off.

305 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

306 Connect the **USB** port to a computer using a USB cable for local configuration.

307 Connect the **Antenna** to the AP for wireless connections.

308 Connect the **Security Slot** to secure the AP to a fixed object.

309 Connect the **Console** port to a computer using a console cable for local configuration.

310 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

311 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

312 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

313 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

314 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

315 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

316 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

317 Press the **WPS** button for more than 1 second to enable the WPS function.

318 Press the **LED** button for more than 1 second to turn the LEDs on or off.

319 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

320 Connect the **USB** port to a computer using a USB cable for local configuration.

321 Connect the **Antenna** to the AP for wireless connections.

322 Connect the **Security Slot** to secure the AP to a fixed object.

323 Connect the **Console** port to a computer using a console cable for local configuration.

324 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

325 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

326 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

327 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

328 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

329 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

330 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

331 Press the **WPS** button for more than 1 second to enable the WPS function.

332 Press the **LED** button for more than 1 second to turn the LEDs on or off.

333 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

334 Connect the **USB** port to a computer using a USB cable for local configuration.

335 Connect the **Antenna** to the AP for wireless connections.

336 Connect the **Security Slot** to secure the AP to a fixed object.

337 Connect the **Console** port to a computer using a console cable for local configuration.

338 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

339 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

340 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

341 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

342 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

343 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

344 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

345 Press the **WPS** button for more than 1 second to enable the WPS function.

346 Press the **LED** button for more than 1 second to turn the LEDs on or off.

347 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

348 Connect the **USB** port to a computer using a USB cable for local configuration.

349 Connect the **Antenna** to the AP for wireless connections.

350 Connect the **Security Slot** to secure the AP to a fixed object.

351 Connect the **Console** port to a computer using a console cable for local configuration.

352 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

353 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

354 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

355 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

356 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

357 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

358 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

359 Press the **WPS** button for more than 1 second to enable the WPS function.

360 Press the **LED** button for more than 1 second to turn the LEDs on or off.

361 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

362 Connect the **USB** port to a computer using a USB cable for local configuration.

363 Connect the **Antenna** to the AP for wireless connections.

364 Connect the **Security Slot** to secure the AP to a fixed object.

365 Connect the **Console** port to a computer using a console cable for local configuration.

366 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

367 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

368 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

369 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

370 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

371 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

372 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

373 Press the **WPS** button for more than 1 second to enable the WPS function.

374 Press the **LED** button for more than 1 second to turn the LEDs on or off.

375 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

376 Connect the **USB** port to a computer using a USB cable for local configuration.

377 Connect the **Antenna** to the AP for wireless connections.

378 Connect the **Security Slot** to secure the AP to a fixed object.

379 Connect the **Console** port to a computer using a console cable for local configuration.

380 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

381 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

382 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

383 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

384 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

385 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

386 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

387 Press the **WPS** button for more than 1 second to enable the WPS function.

388 Press the **LED** button for more than 1 second to turn the LEDs on or off.

389 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

390 Connect the **USB** port to a computer using a USB cable for local configuration.

391 Connect the **Antenna** to the AP for wireless connections.

392 Connect the **Security Slot** to secure the AP to a fixed object.

393 Connect the **Console** port to a computer using a console cable for local configuration.

394 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

395 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

396 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

397 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

398 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

399 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

400 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

401 Press the **WPS** button for more than 1 second to enable the WPS function.

402 Press the **LED** button for more than 1 second to turn the LEDs on or off.

403 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

404 Connect the **USB** port to a computer using a USB cable for local configuration.

405 Connect the **Antenna** to the AP for wireless connections.

406 Connect the **Security Slot** to secure the AP to a fixed object.

407 Connect the **Console** port to a computer using a console cable for local configuration.

408 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

409 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

410 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

411 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

412 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

413 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

414 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

415 Press the **WPS** button for more than 1 second to enable the WPS function.

416 Press the **LED** button for more than 1 second to turn the LEDs on or off.

417 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

418 Connect the **USB** port to a computer using a USB cable for local configuration.

419 Connect the **Antenna** to the AP for wireless connections.

420 Connect the **Security Slot** to secure the AP to a fixed object.

421 Connect the **Console** port to a computer using a console cable for local configuration.

422 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

423 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

424 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

425 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

426 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

427 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

428 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

429 Press the **WPS** button for more than 1 second to enable the WPS function.

430 Press the **LED** button for more than 1 second to turn the LEDs on or off.

431 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

432 Connect the **USB** port to a computer using a USB cable for local configuration.

433 Connect the **Antenna** to the AP for wireless connections.

434 Connect the **Security Slot** to secure the AP to a fixed object.

435 Connect the **Console** port to a computer using a console cable for local configuration.

436 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

437 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

438 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

439 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

440 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

441 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

442 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

443 Press the **WPS** button for more than 1 second to enable the WPS function.

444 Press the **LED** button for more than 1 second to turn the LEDs on or off.

445 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

446 Connect the **USB** port to a computer using a USB cable for local configuration.

447 Connect the **Antenna** to the AP for wireless connections.

448 Connect the **Security Slot** to secure the AP to a fixed object.

449 Connect the **Console** port to a computer using a console cable for local configuration.

450 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

451 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

452 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

453 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

454 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

455 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

456 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

457 Press the **WPS** button for more than 1 second to enable the WPS function.

458 Press the **LED** button for more than 1 second to turn the LEDs on or off.

459 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

460 Connect the **USB** port to a computer using a USB cable for local configuration.

461 Connect the **Antenna** to the AP for wireless connections.

462 Connect the **Security Slot** to secure the AP to a fixed object.

463 Connect the **Console** port to a computer using a console cable for local configuration.

464 Press the **Reset** button for more than 5 seconds to return the AP to the factory default settings (all LEDs will turn off when you release the button).

465 Slide the **Kensington Lock** slot to secure the AP to a fixed object.

466 Connect the **DC 12V** port to a power adapter and connect the adapter to a power source.

467 Connect the **LAN1** port to a PoE switch or router using an Ethernet cable for Internet access.

468 Connect the **LAN2** port to a computer using an Ethernet cable for local configuration.

469 Connect the **LAN3** port to a PoE switch using an Ethernet cable for local network access.

470 Connect the **LAN4** port to a PoE switch using an Ethernet cable for local network access.

471 Press the **WPS** button for more than 1 second to enable the WPS function.

472 Press the **LED** button for more than 1 second to turn the LEDs on or off.

473 Press the **Mode** button for more than 1 second to switch between Nebula and Standalone mode.

474 Connect the **USB** port to a computer using a USB cable for local configuration.

475 Connect the **Antenna** to the AP for wireless connections.

476 Connect the **Security Slot

1. The product supports automatically. Use the wizard to set up your QuickFinder.
2. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
3. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
4. **Wall mounting bracket** – Use the bracket to mount the QuickFinder on a wall. Drill holes in the wall and fix the bracket with the screws provided.
5. **Ceiling mounting bracket** – Use the bracket to mount the QuickFinder on the ceiling. Drill holes in the ceiling and fix the bracket with the screws provided.
6. **Ceiling mounting screws** – Use these screws to fix the ceiling bracket to the ceiling.
7. **Wall mounting screws** – Use these screws to fix the wall bracket to the wall.
8. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
9. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
10. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
11. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
12. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
13. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
14. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
15. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
16. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
17. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
18. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
19. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
20. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
21. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
22. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
23. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
24. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
25. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
26. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
27. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
28. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
29. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
30. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
31. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
32. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
33. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
34. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
35. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
36. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
37. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
38. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
39. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
40. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
41. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
42. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
43. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
44. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
45. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
46. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
47. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
48. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
49. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
50. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
51. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
52. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
53. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
54. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
55. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
56. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
57. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
58. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
59. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
60. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
61. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
62. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
63. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
64. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
65. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
66. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
67. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
68. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
69. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
70. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
71. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
72. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
73. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
74. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
75. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
76. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
77. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
78. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
79. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
80. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
81. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
82. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
83. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
84. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
85. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
86. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
87. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
88. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
89. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
90. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
91. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
92. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
93. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
94. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
95. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
96. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
97. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
98. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
99. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
100. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
101. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
102. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
103. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
104. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
105. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
106. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
107. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
108. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
109. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
110. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
111. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
112. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
113. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
114. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
115. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
116. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
117. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
118. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
119. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
120. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
121. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
122. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
123. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
124. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
125. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
126. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
127. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
128. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
129. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
130. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
131. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
132. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
133. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
134. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
135. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
136. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
137. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
138. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
139. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
140. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
141. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
142. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
143. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
144. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
145. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
146. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
147. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
148. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
149. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
150. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
151. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
152. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
153. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
154. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
155. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
156. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
157. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
158. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
159. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
160. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
161. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
162. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
163. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
164. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
165. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
166. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
167. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
168. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
169. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
170. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
171. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
172. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
173. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
174. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
175. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
176. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
177. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
178. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
179. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
180. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
181. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
182. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
183. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
184. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
185. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
186. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
187. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
188. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
189. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
190. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
191. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
192. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
193. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
194. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
195. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
196. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
197. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
198. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
199. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
200. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
201. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
202. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
203. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
204. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
205. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
206. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
207. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
208. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
209. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
210. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
211. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
212. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
213. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
214. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
215. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
216. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
217. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
218. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
219. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
220. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
221. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
222. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
223. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
224. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
225. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
226. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
227. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
228. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
229. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
230. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
231. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
232. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
233. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
234. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
235. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
236. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
237. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
238. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
239. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
240. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
241. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
242. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
243. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
244. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
245. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
246. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
247. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
248. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
249. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
250. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
251. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
252. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
253. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
254. **Ethernet** – Connect to your network using an Ethernet cable. The LED turns steady blue if your router has an internet connection. Ethernet is optional if you have a strong Wi-Fi signal.
255. **Power** – Connect the power cable. The LED flashes blue and then orange. Wait until the LED turns steady blue. This may take up to 2 minutes.
256. **Ethernet** – Connect to your network using an Ethernet cable. The LED
