

SecuReporter **Cloud Analytics Service**

The Zyxel SecuReporter is a cloud-based intelligent analytics and report service with collection and correlation features designed for ZyWALL product lines.

It provides network administrators with a centralized view of network activities and potential threats within the entire network; you will not miss another alert or notification with the accompanied SecuReporter app*1.

Benefits

Scale capacity and save cost with cloud computing

Cloud-based "Software as a Service" (SaaS) is easy to scale up cloud capacity, drawing on the service's remote servers, allowing to cut out the high cost of hardware.

SecuReporter

Datasheet SecuReporter

Cloud-based "Software as a

Custom and preconfiguredreporting

Ease of setup and monitor

Instant alerts and notifications on app*1

Creates customized reports that fit your preferences

The Zyxel SecuReporter provides customized reports in PDF formats. Users can define their own logo, title, comments or suggestions for their report. Users can also generate a report on-the-spot or schedule it daily, weekly, or monthly.

Features easy setup and monitoring the network with an App^{*1}

Users activate SecuReporter on the cloud with an easy setup flow. Enjoy data analysis immediately. Administrators can proactively monitor network status at anytime and anywhere with the built-in app^{*1} notification.

Pinpoints data of threat with user-friendly interface

Quickly assesses risky user with in-depth analytics

The User Threat Quotient helps IT security managers spot out risky users at a glance without the extra effort of correlating additional network logs and events. Get in-depth analysis of all events and traffic caused by these users with anomalous behavior.

Complies with national personal data protection regulations

We are committed to following the latest national data protection regulations, such as the GDPR and OECD Privacy Principles. SecuReporter offers three options you can choose: Partially anonymous, Fully Anonymous, Non-Anonymous to protect personal data.

Offers a diversity of in-depth analytics including summary of the ratio of events, top 100 victims of the specific event and logs relative specific victim, helps organizations find hidden threats and anomalous behavior across user.

*1: SecuReporter App will be available in Q1 2019.

Dashboard

Network & Threat Map

Centralized display of your devices with a city-level location, device name, IP address, online and alert status. Threat Map views the origins of attack packets frequency and location.

Analyzer

Analyzes traffic anomalies based on a specific timeline, threat trend, anomaly packet trend, top malware detected, and more.

Report

Customizable reports with a graphical interface. Create reports with your logo on a scheduled basis or immediately.

Specifications

User interface

Network Map of Organizations

- Landmark with brief info including network site names, device names and IP addresses
- Events/Alarms notification symbol
- Online/Offline status indication symbol
- Location is available by GeoIP information to city level

Threat Map

- Shows statistics of attack packets in real time (detected in the entire organization)
- Show tabular format when selecting a specific country

Dashboard

- Recent Alerts
- Total Counts of Malware/virus Detected
- Spam Emails Detected
- Anomalies Detected
- Blocked Requests
- Threat Trend (last 7 days)
